FOOD PRODUCT CUP FILLING MACHINE

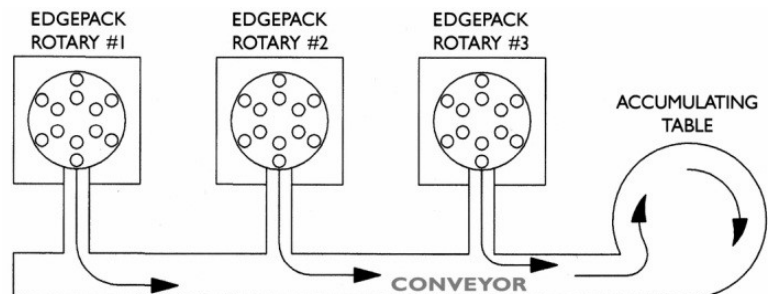

Edge pack's cup filling and sealing machine is simple, compact, mobile, and affordable to meet your packaging demands. Process between 30 - 50 units per minute (depending on cup size, product type, and other parameters).

With eighteen years of sales, support, and ongoing development, the Edgepack machine can be tooled to handle a variety of liquid and semi-liquid products. Our creative staff is ready to further customize the design to fit your particular application and mesh with any existing handling equipment.

The machine is ideal for liquids and slurry-type products. The standard tooling package features a two-lane carouse.

MODULAR SCALING

- Add machines as the product line grows
- Run multiple flavors
- Swap in and out for maintenance and cleaning

OPERATION

The carousel fills and seals cups in six positions. Load cups, lid foils, and product for the machine to fill. An operator can adjust speed and foil seal temperature through the washdown touchscreen. Fine adjustments to product fill can be made manually.
